Background & Aim

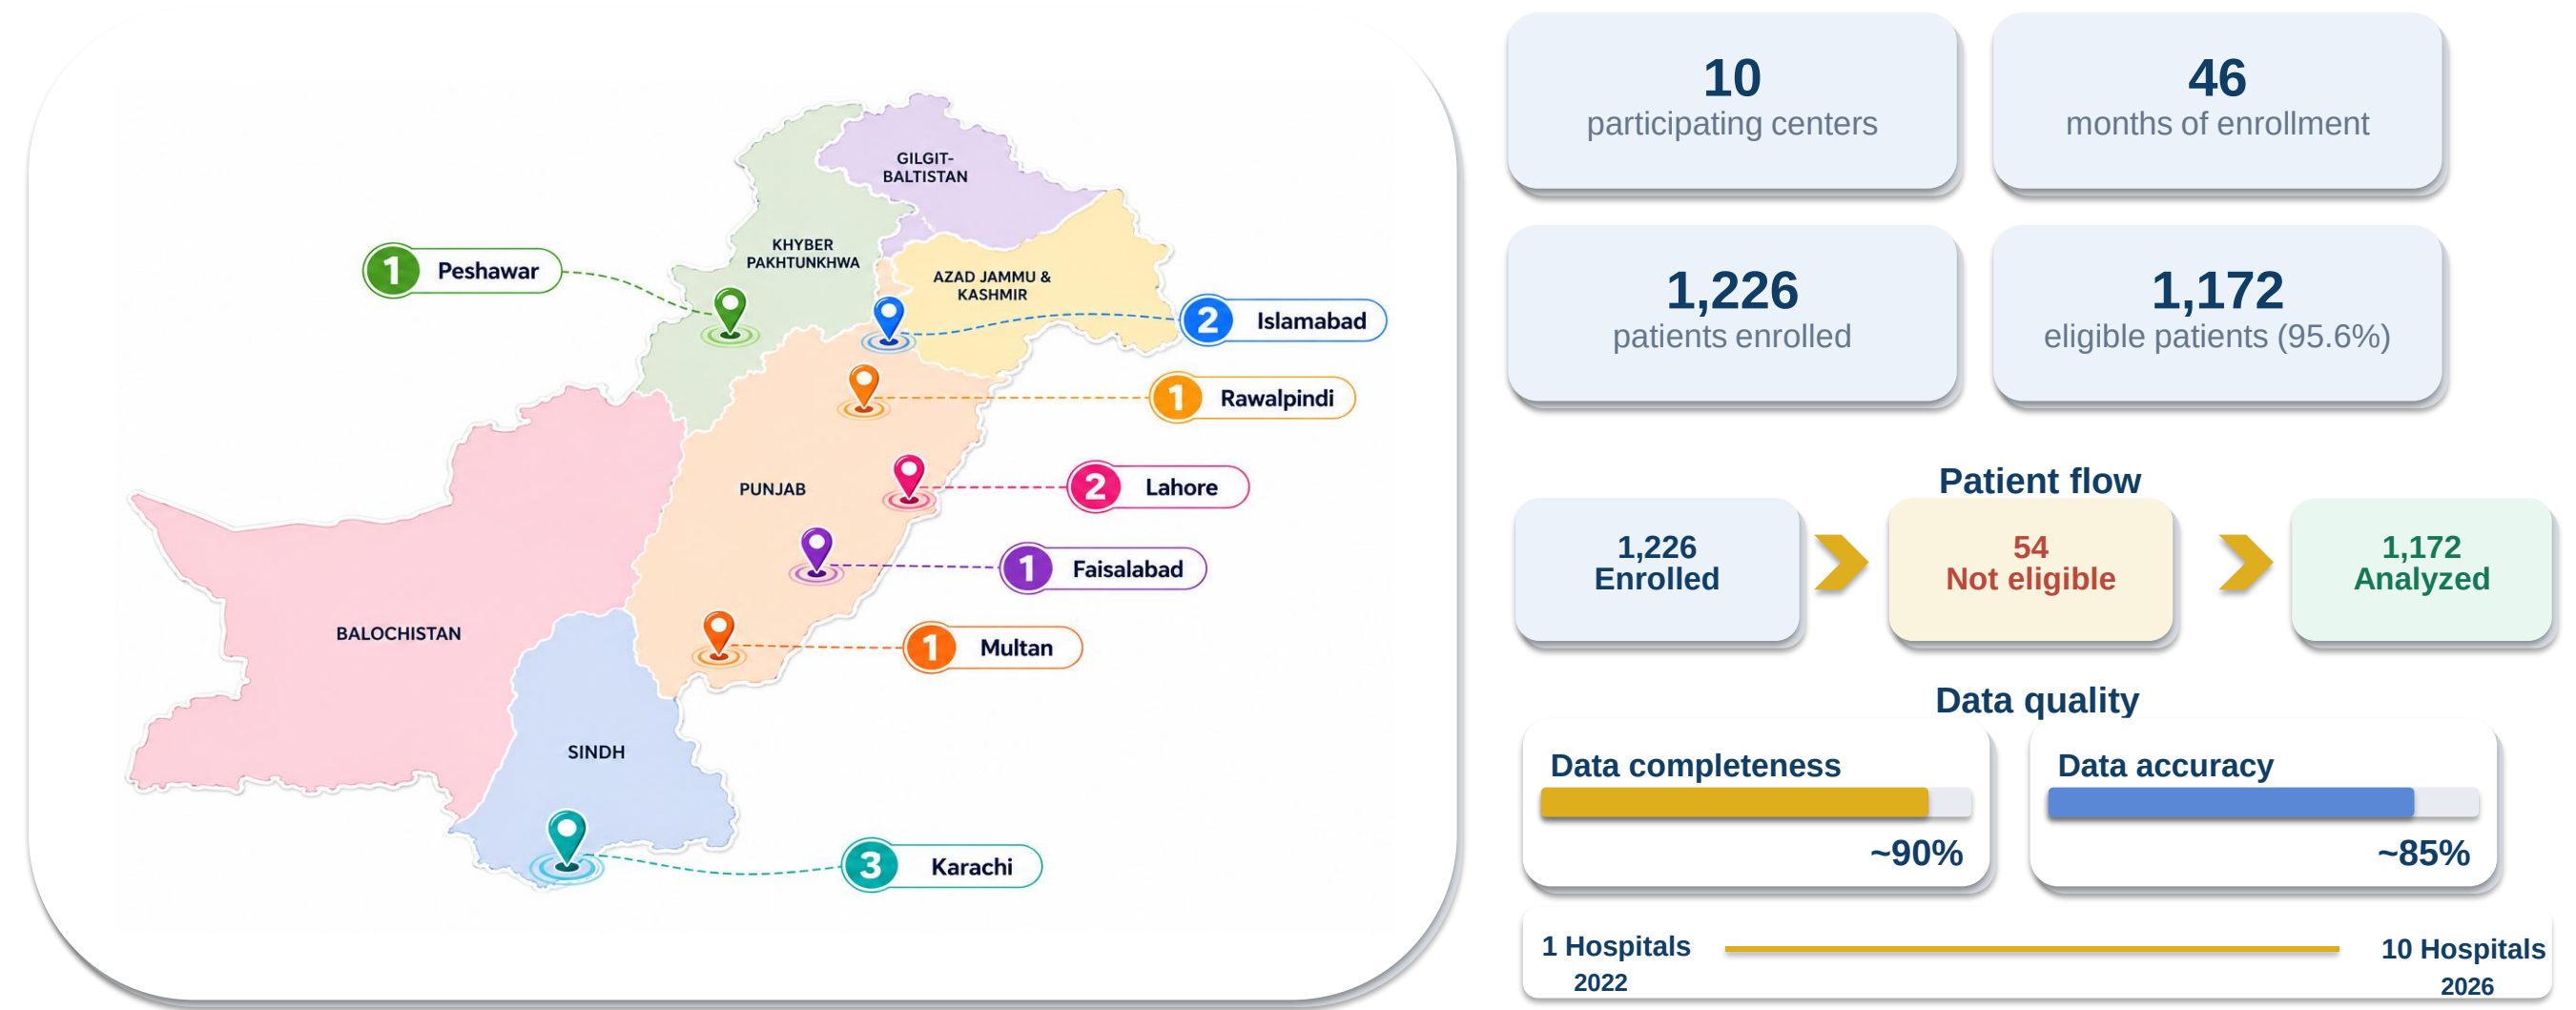

Standardized treatment approaches are essential in low- and middle-income countries to improve the quality, consistency, and accuracy of pediatric cancer care. The Pakistan Society of Pediatric Oncology (PSPO) initiated a national Standard-of-Care protocol for pediatric classical Hodgkin lymphoma (cHL) in Pakistan, aiming to develop, implement, and evaluate a nationally applicable treatment approach supported by centralized data capture across multiple centers.

- Feasibility
- Safety
- Cost-effectiveness
- Data quality

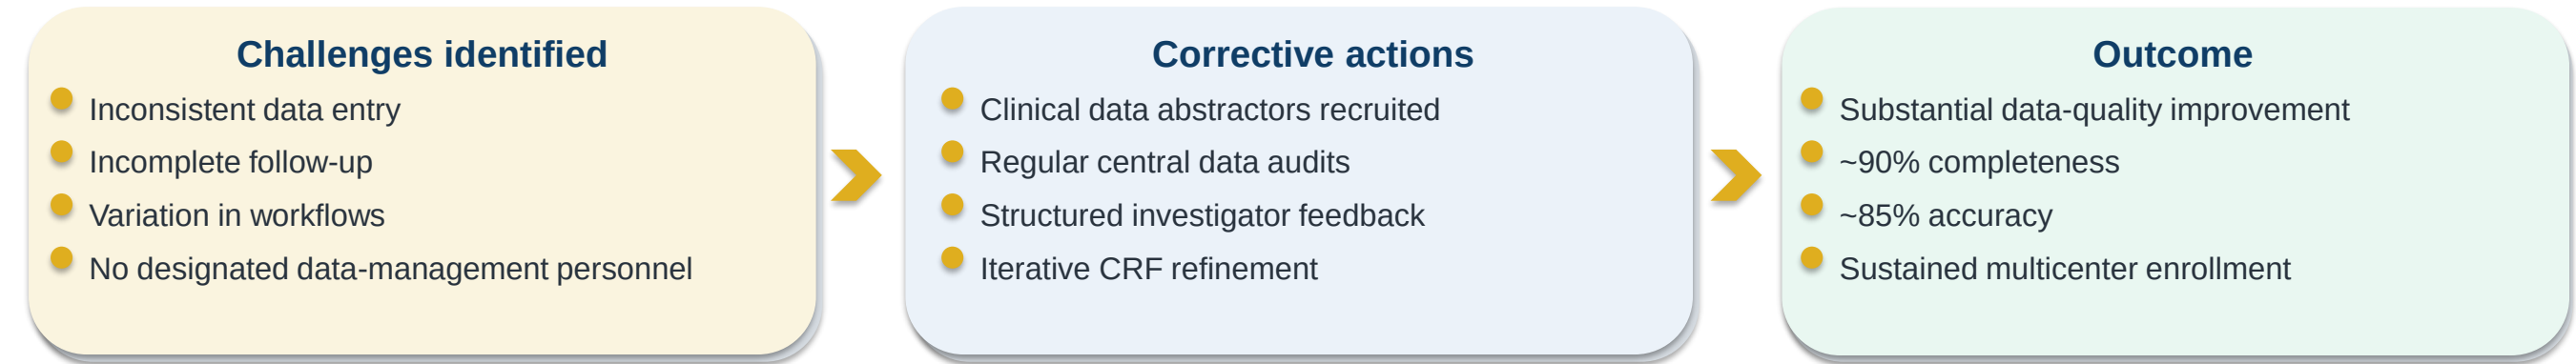

Methods: Development & Implementation Pathway

Results: National Scale-up & Enrollment

Implementation Learning: Challenges → Corrective Actions → Outcome

Conclusion
